16. (Currently Amended) [[The]] A cleaning apparatus [[of Claim 15,]]comprising:  
a handle having:

an operational control;

a pair of pins formed at a proximal end of said handle;

an internal compartment housing a power source and motor, said power source  
and motor electrically coupled to said operational control;

a cleaning head removably attached to a distal end of said handle;

a first extension arm, a second extension arm, and a third extension arm, wherein each  
one of said arms comprises:

a cavity formed at a distal end of said arm, said cavity receiving said  
proximal end of said handle;

a pair of slots formed circumjacent said cavity, each one of said slots  
receiving and coupling with each one of said pins;

wherein one of said curvilinear extension arm and said angled extension arm is coupled to said handle, wherein said handle, said curvilinear extension and said angled extension arm form a U-shape for reaching elevated and recessed areas.

17. (Canceled)

18. Canceled.

19. (Currently Amended) [[The]] A cleaning apparatus [[of Claim 17,]] comprising:

a handle having:

an operational control;

a pair of pins formed at a proximal end of said handle;  
an internal compartment housing a power source and motor, said power source  
and motor electrically coupled to said operational control;  
a cleaning head removably attached to a distal end of said handle; and  
a first extension arm, a second extension arm, and a third extension arm, wherein each  
one of said arms comprises:  
a cavity formed at a distal end of said arm, said cavity receiving said  
proximal end of said handle;  
a pair of slots formed circumjacent said cavity, each one of said slots  
receiving and coupling with each one of said pins;  
wherein one of said arms is an angled extension arm and one said arm is a  
curvilinear extension arm, said angled extension arm and said curvilinear extension arm is  
coupled to said handle, wherein said handle, said curvilinear extension and said angled extension  
arm form a U-shape for reaching elevated and recessed areas and said angled extension arm is  
coupled to said curvilinear extension arm.
